RE: BRL Project: AXS018

Client Contract No: 4574 WG35243 (REQ5505)  
 Purchase Order: 15097

Dear Ms. Tomey,

On January 18, 2011, Brooks Rand Labs (BRL) received four (4) homogenized fish tissue samples. Samples were logged-in for the contracted analyses of mercury (Hg), silver (Ag), aluminum (Al), cadmium (Cd), chromium (Cr), copper (Cu), iron (Fe), nickel (Ni), lead (Pb), selenium (Se), zinc (Zn), and total solids determination. All samples were received, prepared, analyzed, and stored according to BRL SOPs and EPA methodology.

The sample collection dates were provided by the client after samples were received at BRL. The month of collection was known, but not the date of the collection. All samples were logged-in for the first day of the known collection month. Please note EPA Method 1631 (Hg) cites samples have a one year holding time from the date of collection until analysis. EPA Method 1638 (ICP-MS metals) was written for the analysis of water samples; BRL performs a modification of this method for solid matrices and stipulates a one year holding time as well. BRL did not qualify sample results based on the collection month/year provided.

The recovery criteria limits did not apply to specific elements when the certified reference materials (CRMs) only listed information values. The recovery limits were not applicable (**N/A**). Not all CRMs provided certified or information values for all elements; therefore, not all elements were reported.

In instances where the native sample result and/or the associated method duplicate result were below the MDL the relative percent difference was not calculated (**N/C**).

The Ni analysis of DOLT-4 (B110198-SRM1) produced a recovery below the accepted limit (60%). The result and the certified value were less than 5x the MRL and the difference between the two was less than 2x the MRL. This satisfied the secondary acceptance criteria and no results were qualified.

The results were method blank corrected as described in the calculations section of the relevant BRL SOP(s) and may be evaluated using adjusted reporting limits to account for sample aliquot size. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details. Aside from concentration qualifiers, all data was reported without qualification and all associated quality control sample results meet the acceptance criteria. Sample results have

been reported on a wet and dry-weight basis in both the hard copy report and electronic data deliverables.

BRL, an accredited laboratory, certifies that the reported results of all analyses for which BRL is NELAP accredited meet all NELAP requirements. For more information please see the *Report Information* page in your report. Please feel free to contact us if you have any questions regarding this report.

Sincerely,

Tiffany Stilwater  
Project Manager

## Report Information

### Laboratory Accreditation

BRL is accredited by the *National Environmental Laboratory Accreditation Program* (NELAP) through the State of Florida Department of Health, Bureau of Laboratories (E87982) and is certified to perform many environmental analyses. BRL is also certified by many other states to perform environmental analyses. For a current list of our accreditations/certifications, please visit our website at <<http://www.brooksrand.com/default.asp?contentID=586>>. Results reported relate only to the samples listed in the report.

### Field Quality Control Samples

Please be notified that certain EPA methods require the collection of field quality control samples of an appropriate type and frequency; failure to do so is considered a deviation from some methods and for compliance purposes should only be done with the approval of regulatory authorities. Please see the specific EPA methods for details regarding required field quality control samples.

### Common Abbreviations

<b>BLK</b>	method blank	<b>MS</b>	matrix spike
<b>BRL</b>	Brooks Rand Labs	<b>MSD</b>	matrix spike duplicate
<b>BS</b>	laboratory fortified blank	<b>ND</b>	non-detect
<b>CAL</b>	calibration standard	<b>NR</b>	non-reportable
<b>CCV</b>	continuing calibration verification	<b>PS</b>	post preparation spike
<b>COC</b>	chain of custody record	<b>REC</b>	percent recovery
<b>CRM</b>	certified reference material	<b>RPD</b>	relative percent difference
<b>D</b>	dissolved fraction	<b>RSD</b>	relative standard deviation
<b>DUP</b>	duplicate	<b>SCV</b>	secondary calibration verification
<b>ICV</b>	initial calibration verification	<b>SOP</b>	standard operating procedure
<b>MDL</b>	method detection limit	<b>SRM</b>	standard reference material
<b>MRL</b>	method reporting limit	<b>T</b>	total recoverable fraction

### Definition of Data Qualifiers

(Effective 9/23/09)

- B** Detected by the instrument, the result is  $>$  the MDL but  $\leq$  the MRL. Result is reported and considered an estimate.
- E** An estimated value due to the presence of interferences. A full explanation is presented in the narrative.
- H** Holding time and/or preservation requirements not met. Result is estimated.
- J** Estimated value. A full explanation is presented in the narrative.
- J-M** Duplicate precision (RPD) for associated QC sample was not within acceptance criteria. Result is estimated.
- J-N** Spike recovery for associated QC sample was not within acceptance criteria. Result is estimated.
- M** Duplicate precision (RPD) was not within acceptance criteria. Result is estimated.
- N** Spike recovery was not within acceptance criteria. Result is estimated.
- R** Rejected, unusable value. A full explanation is presented in the narrative.
- U** Result is  $\leq$  the MDL or client requested reporting limit (CRRL). Result reported as the MDL or CRRL.
- X** Result is not BLK-corrected and is within 10x the absolute value of the highest detectable BLK in the batch.  
Result is estimated.

These qualifiers are based on those previously utilized by Brooks Rand, Ltd., those found in the EPA SOW ILM03.0, Exhibit B, Section III, pg. B-18, and the USEPA Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses; USEPA; July 2002. These supersede all previous qualifiers ever employed by BRL.
